POFESSIONAL SUMMARY:

Software Engineer specialized in Go (Golang) and PostgreSQL backend systems. Expert in leveraging modern tools like sqlc for type-safe database interactions and HTMX for efficient, lean development. Proven ability to design scalable architectures and maintain clean code, with hands-on expertise in Docker, Git, and complex system troubleshooting.

TECHNICAL SKILLS:

Languages: Go (Golang), C++, Python

Backend & API: REST APIs, Microservices Architecture, sqlc, Modulith Architecture

Frontend: HTML5, CSS3, Javascript, HTMX,

Databases: PostgreSQL (Schema Design, Optimization), SQLite, SQL

DevOps & Automation Tools: Docker, CI/CD, Zed, Git, Linux (CMD/Scripting), Curl

Languages Known: English, Hindi, Urdu, Kannada

EXPERIENCE:

Freelance Software & Web Developer | *Self-Employed* | January 2026 – Present

- Architect and develop high-performance backend systems using Go (Golang), PostgreSQL, and HTMX.
- Consult for clients on database schema design, REST API development, and server-side rendering strategies.
- Manage full project lifecycles, from creating Business Requirements Documents (BRD) to deployment and code optimization.

Software Engineer | *Our Thoughts LSKJ* | July 2025 – December 2025

- Engineered core backend services utilizing a **Go/HTMX stack**, focusing on server-side performance and minimal framework overhead.
- Developed type-safe database interactions using sqlc, significantly reducing runtime errors and improving data integrity.
- Drafted and refined comprehensive Software Requirements Specifications (SRS) to align technical implementation with business objectives.

Data Annotation Specialist | *Third-Party Agency* | *May 2024 – December 2024*

- Performed precise data labeling and validation to support the training and refinement of AI/ML models.
- Analyzed complex datasets, ensuring high-quality output and adherence to strict project guidelines and technical specifications.
- Maintained consistent accuracy and throughput in a high-volume, deadline-driven environment, contributing to the development of robust machine learning datasets.

PROJECTS:

Poultry Enterprise Management System | *Golang, PostgreSQL, Docker*

- Designed a vertical integration and hierarchical role-based access control (RBAC) system for logistics.
- Optimized database schemas for supply chain efficiency.

Startup Engineering Studio | *Go, HTMX, PostgreSQL*

- Developed a startup portal focusing on lead capture and modular UI components.
- Implemented clean, maintainable backend structures for future-proof scalability.

EDUCATION:

Bachelor of Engineering (B.E.) in Computer Science | KLE College of Engineering and Technology | 2020 – 2023

Diploma in Computer Science | KLE's C B Kore Polytechnic | 2017 – 2020
